

SHETH L.U.J AND SIR M.V. COLLEGE
SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

Practical No. 8

Aim: Performing Advanced Analytics using Trends, Clustering, and Forecasting

- a) Add and interpret trend lines (linear, exponential)
- b) Customize and analyze trend models
- c) Perform clustering on datasets
- d) Analyze distributions using built-in tools
- e) Apply forecasting techniques
- f) Compare different statistical models
- g) Export and interpret statistical results

Dataset: Indian_Climate_Dataset_2024_2025.csv

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

A: Add and Interpret Trend Lines (Linear, Exponential)

Task 1: Connect Dataset & Build a Scatter Plot / Line Chart

Open **Tableau**, load the CSV, and rename the sheet **Temperature vs Humidity Trends**. Then set **Humidity (%)** → **Columns**, **Temperature_Avg (°C)** → **Rows**, and disable **Aggregate Measures**.

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

Task 2: Add a Linear Trend Line

Open the **Analytics** pane, drag **Trend Line** onto the chart, and drop it on **Linear** to add a straight trend line.

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

Hover over the trend line to view the **linear equation**, **R² value**, and **P-value** automatically provided by Tableau.

Task 3: Add an Exponential Trend Line for Non-Linear Measures (Rainfall vs. Humidity)

Create a worksheet named **Humidity vs Rainfall**, place **Humidity (%)** on Columns and **Rainfall (mm)** on Rows, uncheck **Analysis** → **Aggregate Measures**, then add an **Exponential Trend Line** from the **Analytics** pane.

SHETH L.U.J AND SIR M.V. COLLEGE
SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

Task 4: Interpret the Results

Linear Model: Shows a steady direct or inverse relationship, such as humidity increasing or decreasing average temperature.

Exponential Model: Shows a rapidly accelerating relationship, such as rainfall increasing sharply at higher humidity levels.

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

B: Customize and Analyze Trend Models

Task 1: Disaggregate Trend Lines by City

Open or duplicate **Temperature vs Humidity Trends**, drag **City** to **Color** on the Marks card, then compare the individual trend lines for coastal and inland cities.

Krishna Nandkumar Chaudhary

T074

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

Task 2: Compare Different Model Types (Polynomial & Logarithmic)

Right-click any trend line, select **Edit Trend Lines**, compare the **Linear**, **Logarithmic**, and **Polynomial** models, then choose **Polynomial (Degree 2)** and click **OK** to observe the curved fit.

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

Task 3: Access Full Statistical Summaries (Describe Model)

Right-click the chart and select **Describe Trend Line** to view equations, R^2 , and P-values, then select **Describe Trend Model** to review ANOVA, degrees of freedom, SSE, and F-statistic, and compare cities by their R^2 values.

Krishna Nandkumar Chaudhary

T074

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

C: Perform Clustering on Datasets

Task 1: Build a Multi-Metric Scatter Plot Matrix

Create a worksheet named **Climate & AQI Clusters**, place **AQI** on Columns and **Temperature_Avg** (°C) on Rows, uncheck **Analysis** → **Aggregate Measures**, and drag **City** to **Detail** on the Marks card.

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

Task 2: Apply Built-in Tableau Clustering

Open the **Analytics** pane, drag **Cluster** onto the chart, add **AQI**, **Temperature_Avg (°C)**, **Humidity (%)**, and **Wind_Speed (km/h)** as variables, leave **Number of Clusters** as **Automatic**, and close the dialog to color-code the data points by cluster.

SHETH L.U.J AND SIR M.V. COLLEGE
SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

Task 3: Analyze Cluster Profiles & Save as Dimension

Right-click Clusters in the Marks card or legend, select Describe Clusters, then review Summary for each cluster's mean values and Models for ANOVA F-statistics and p-values showing which variables best separate the clusters.

D: Analyze Distributions using Built-in Tools

Task 1: Create a Box Plot for Temperature Distributions by City

Create **Temperature Distributions**, place **City** on Columns and **Temperature_Max (°C)** on Rows, uncheck **Analysis** → **Aggregate Measures**, then use **Analytics** → **Custom** → **Box Plot** and hover over the plots to view **Q1, Median, Q3, whiskers, and outliers**.

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

Task 2: Build an AQI Histogram & Quantile/Percentile View

Create **AQI Histogram**, select **AQI**, choose **Show Me** → **Histogram**, then drag **City** to **Color** on the Marks card to compare AQI distributions across cities.

E: Apply Forecasting Techniques

Task 1: Set Up a Time Series Line Chart

Create **Temperature Forecast**, place **Date** on Columns as **continuous Month (Month Year)**, place **AVG(Temperature_Max (°C))** on Rows, and filter **City** to 2-3 cities such as Mumbai, Delhi, and Bengaluru.

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

Open the Analytics pane, drag Forecast from Model onto the chart, and Tableau will extend the line with a shaded prediction interval showing the future forecast.

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

Task 2: Customize & Analyze the Forecast

Right-click the chart and go to **Forecast** → **Forecast Options**, set **Forecast Length** to **Exactly 6 Months** and **Prediction Interval** to **95%**, then use **Forecast** → **Describe Forecast** to review **RMSE** and the selected **Additive/Multiplicative model**.

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

F: Compare different Statistical Models

Task 1: Set Up the Comparison View

Create **Model Comparison**, place **Temperature_Max (°C)** on Columns and **AQI** on Rows as continuous measures, then drag **City** to **Detail** on the Marks card to create the scatter plot.

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

Task 2: Add and Swap Statistical Models

Open **Analytics**, add a **Linear Trend Line**, record its **R²** and **p-value**, then use **Edit Trend Lines** to test **Linear**, **Logarithmic**, **Exponential**, and **Polynomial** models and compare their **R²** and **p-values** to identify the best fit.

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

G: Export and Interpret Statistical Results

Task 1: Export the Statistical Model Description

Right-click the trend line or canvas, select **Describe Trend Model** (or **Describe Forecast**), then click **Copy** or **Export** to save the **ANOVA summary and parameter estimates** for your practical record.

SHETH L.U.J AND SIR M.V. COLLEGE

SUBJECT NAME: DATA VISUALIZATION WITH POWER BI & TABLEAU

Task 2: Interpret the Key Output Metrics

When reviewing the results, focus on the **Equation Parameters** (intercept and slope), **R²** (the percentage of AQI variance explained by temperature), and the **p-value** (a value below **0.0001** indicates a statistically significant relationship).
